PROFESSIONAL SUMMARY

Dynamic Senior Java Developer with a proven track record at Medical IT Revolution, architecting and leading the backend of a hospital-grade microservice ecosystem built on an N-layered Java Spring Boot core. Proven expertise in driving architectural discussions and fostering team collaboration. Skilled in REST APIs and code quality assurance, with a strong focus on delivering innovative solutions that align with business objectives.

SKILLS

- System Architecture
- Backend Development
- Database Management
- Identity and Access Management
- Cloud & DevOps Collaboration
- API Development & Testing
- Team Leadership & Mentorship
- Technical Guidance
- Cross-functional Communication
- Agile Development
- Ticketing & Planning Tools
- Monitoring & Logging

WORK HISTORY

November 2025 - Current
HTEC Group - Java Software Engineer, Skopje
I specialize in developing high-availability, safety-critical software for Air Traffic Management using a modern Java-based microservices architecture. My work focuses on building resilient, real-time systems that ensure the seamless flow of aviation data across distributed environments.

Key Responsibilities & Tech Stack:

- **Microservices Architecture**: Developed and maintained modular services using Java and Multi-module Maven structures, ensuring scalable and maintainable codebases for complex ATM logic.
- **Event-Driven Communication**: Leveraged Messaging Brokers to facilitate asynchronous, low-latency communication between services, handling critical flight and radar data.
- **Cloud & Containerization**: Orchestrated the deployment of Dockerized applications onto a proprietary, in-house cloud infrastructure, optimizing the CI/CD pipeline for specialized aviation environments.
- **System Integrity**: Focused on the architectural design of shared libraries and services to support a high-performance, 24/7 operational environment where reliability is paramount.

May 2018 - Current

Jas I Ti - Co-Founder, Skopje

- Developed, administered, and maintained "Jas i Ti," a comprehensive web platform for wedding invites, couple stories, party introductions, and RSVP management.
- Ensured continuous development, optimal performance, and user experience.
- Actively introducing the latest trends of AI as new tools and features the users can benefit from.
- Developed and implemented strategic business plans to drive growth and increase market share.
- Technology stack and tools included: PHP, Wordpress Multisite hosted on a Linux VPS with Amazon S3 for storage, MySQL DB, Javascript, Casys payment processor, Elastic email sender...

November 2013 - July 2025
Medical IT Revolution - Senior Java Developer / Senior Technical Lead, Skopje

- **Architect & Build Scalable Services**
  Lead the backend development of a microservice ecosystem centered on a robust N-layered Java Spring Boot monolith, serving hospitals and clinics across Europe.
- **Data Management & Optimization**
  Design and maintain relational database schemas in PostgreSQL; implement migrations, indexing and performance tuning to ensure reliable, high-throughput data access.
- **Cloud Infrastructure & Security**
  Deploy, configure and manage our entire backend on Google Cloud Platform (GCP), including:
  Secret Manager for secure credential storage
  Cloud Storage for document and media assets
  Cloud Healthcare FHIR Store for structured patient records
  Collaborate with DevOps team on Docker-based deployments and Kubernetes-managed infrastructure; occasionally use Kubernetes for debugging and issue resolution
- **Event-Driven Architecture**
  Implement asynchronous communication between services using Google Pub/Sub, with dead-letter queues to catch and reprocess failed messages.
- **Technical Leadership & Collaboration**
  Guide a team of 6 backend engineers—facilitating architecture reviews, proof-of-concepts for complex features (e.g., custom FHIR integrations) and fostering a culture of ownership and best practices.
- **Code Quality & Best Practices**
  Perform regular code reviews; establish and enforce coding standards, test coverage targets, and CI/CD pipelines to maintain high reliability and reusability.
- **Strategic Planning & Risk Management**
  Partner with product managers and senior leadership to translate business goals into technical roadmaps, identify dependencies and mitigate risks for on-time, on-budget delivery.

February 2013 - October 2013
Codeart - Web Developer, Skopje

- Developed responsive web applications using PHP, Wordpress, MySQL DB, HTML, CSS, and Vanilla JavaScript and jQuery to enhance user experience across various devices.
- Collaborated with designers to translate wireframes into functional code, ensuring adherence to design specifications and user accessibility standards.

- Maintained and updated existing websites by troubleshooting issues, optimizing performance, and implementing new features based on user feedback.

September 2012 - October 2012
Seavus - Singleview Trainee, Skopje
Analysis of the Singleview billing system and writing and modifying unix and perl scripts to perform billing for Telecommunication services.

July 2011 - September 2011
Netcetera - Intern, Skopje
An information system built with Spring, LDAP authentication, HTML, Javascript for organizing (web-based application) meetings and "power" training sessions for new employees with an automated scheduling process that checks employees' free time and the availability of the room of interest.

CERTIFICATIONS

August 2023
Information Security & Privacy @ Security Academy

September 2022
SCRUM Master training @ Seavus

HOBBIES

- Researching and learning new trends in information technology
- Actively involved in fitness, occasionally with other team sports such as football and basketball
- Great desire to travel and meet new people and cultures
